Profile

Junior Full-Stack Developer, graduate of OpenClassrooms (RNCP Level 7 title, Master's level), with 12 months of work-study experience (alternance) at Paramedic Technologies, in a team of about 10 developers. I delivered about 60 web and mobile tickets (Flutter, React, Python), each one tested (Pytest, Playwright, Patrol), for a platform used by thousands of professionals. I also build secure REST APIs (Java, Spring Boot, JWT) and Angular and React interfaces. A former administrative and accounting manager (who also ran the IT function of the EIAPIC association), I bring analytical rigor and business sense that are valuable in fintech, banking, insurance and management. Since the end of my work-study placement, I have volunteered on the technical design and architecture of the digital overhaul of the SIGMA F association. I am looking for a junior Full-Stack Developer position within a product team.

Technical skills

- **Back-end:** Java, Spring Boot, REST APIs, Spring Security / JWT, layered architecture, Python, SQL, MySQL, MongoDB
- **Front-end:** JavaScript, TypeScript, React, Redux, Angular, HTML5, CSS3, Sass, Bootstrap, responsive design
- **Mobile:** Flutter, Dart, Android Studio
- **Testing & quality:** JUnit (unit and integration tests for Java / Spring Boot), Mockito, Jest, Jasmine, Pytest (Python back-end), Behave (BDD, Gherkin), Cypress (Angular end-to-end), Playwright (web end-to-end), Patrol (Flutter)
- **Tools & DevOps:** Docker, Git / GitHub / GitLab, Swagger / SonarQube / OpenAPI, Claude Code (AI-assisted development)
- **Methods:** teamwork in a team of about 10 developers, Agile methods, architecture design
- **Office tools:** Microsoft Office, Teams, Zoom

Professional experience

Technical Design of a Digital Project — SIGMA F Association (volunteer)

Volunteer work · Since May 2026

Education association (baccalaureate exam preparation) whose aging digital tools need to be rebuilt.

- Technical and architectural design of the association's future digital platform, before any development starts
- Analysis of the project's upcoming challenges (scalability, maintainability, security, deployment platforms)

- Worked in a team of 3 on the technical and budget aspects

Full-Stack Web & Mobile Developer (work-study) — PARAMEDIC Technologies

Paris (75), France · March 2025 – March 2026

Stack: Flutter, Dart, ReactJS, Redux, JavaScript, HTML, CSS, Python, Pytest, Playwright, Behave, Patrol

Platform for managing and optimizing medical patient transport, from patient intake to billing, with real-time patient tracking. The mobile application is used by hundreds of professionals (dispatchers, ambulance companies, drivers) and the SaaS web application by thousands of professionals of all profiles.

- Delivered about 60 tickets in 12 months, mostly large features of 3 to 10 days each, within a team of about 10 developers
- Built new modules from scratch on both the mobile app (Flutter) and the web app, front end and back end: stretcher-bearer (patient transfer) and patient order modules
- Rebuilt the new version of the mobile application (Flutter / Android Studio) as part of the team
- Designed the associated data models and database tables
- Systematically tested every feature developed: Pytest, Behave, Playwright (web end-to-end), Patrol (Flutter)
- Diagnosed issues, created tickets and fixed bugs

Administrative and Accounting Manager — EIAPIC Association

Mantes-la-Jolie (78), France · February 2020 – May 2022

- Developed and ran the association's IT function: set up digital tools for internal and external collaboration and file sharing
- Digitized data and several processes to make remote work practical and efficient
- Maintained the user platforms used to record data related to the association's activity, and managed the IT equipment
- Handled financial management and cash flow, account monitoring and control, accounting closings and preparation of documents for the external accountant, and set up cost accounting
- Managed payroll and contracts (fixed-term, special contracts, Civic Service accreditations) as well as accounting and cross-functional projects

Projects

ChaTop API — Peer-to-peer apartment rental API

Java · Spring Boot · Spring Security · JWT · MySQL · Swagger — GitHub

- Designed a REST API with a layered architecture: sign-up, login, search, booking, publishing and management of rentals
- Secure authentication with JWT
- Image storage and data validation before processing
- Interactive API documentation with Swagger UI

MDD (Monde De Dév) — Social network for developers

Angular · Sass · Java · Spring Boot · MySQL — GitHub

- Full-stack application connecting job-seeking developers around shared interests
- JWT authentication, profile management, data validation
- Topic subscriptions, article creation and comment publishing
- Database modeling (MySQL)

ArgentBank — Banking web application

React · Redux · JavaScript · HTML · CSS · MongoDB — GitHub

- Built a complete, responsive web application for a neobank
- Global state management with Redux
- Specified the API endpoints needed for a future evolution (Swagger)

Other projects: see portfolio
